align="center" With the  
recent Apple versus FBI  
news making headlines,  
the security researchers  
from [i]DigitaSafe[/i] are  
now investigating another  
form of ransomware:  
[b]Screenshots [/b].  
Screenshots are being  
used on a global scale by  
attackers to make  
fraudulent documents  
appear authentic. The

---

threat is increasing and can be easily detected.

Where are those

Screenshots being taken?

From the screenshot, it looks like it's being taken from the [b]Notepad[/b]

and [b]Microsoft

Edge[/b] apps on

Windows 10. Where is

the data being stored on

the device? It's being

stored in the

[b]Documents[/b]

location of the

---

[b]Internal Storage[/b] on all Windows 10 PCs.

How do they work? The attacker is using a legitimate and legitimate looking app to take screenshots. The malicious app then uses a technique to make the fake Screenshots appear to be real. What's going on with this ransomware? Like all ransomware, they demand a
