Have you ever wondered what angle an image (or video) in a portrait / landscape mode is cropped? With Micro Aspect Calculator you can find out in seconds. It runs in the background and lets you specify the source video. The calculation is done very quick - just 3-4 seconds with the most popular images from your device. The results window is as small and quick as possible. Preview the results of the calculation in your app / image gallery / on the screen. The interface can be configured to show a fixed result or allow you to modify the result settings - e.g. rotate the image 90°, 180°, 270°, or zoom in / out with the pinch-zoom technique. Beware! If you manipulate the image, be careful to not start a new calculation - the last calculation is remembered. It's very easy to use, just open the app and double-click on the video source you want to analyse, and you can even send a photo to Micro Aspect Calculator directly from your device.
