AVG Clear (AVG Remover) Crack+ [Latest]

Remove: Starting with version 2010, Avira - Free Antivirus has introduced an inbuilt uninstaller that detects and removes all of your applications, settings and backup files. It is a small and user friendly tool that helps you find and remove unused files, services and registry entries that are uninstalled but not deleted. You can also use it to easily remove Avira's removal tool. Remove Unused Software If you haven't configured your PC to uninstall software automatically, the standard features of Avira Uninstaller are not very useful. To make sure that you don't miss any of Avira's latest updates, the inbuilt uninstaller helps find out all Avira-related software installed on your system. It then shows all of the software that you have installed, including complete registry entries. You can remove any software that you don't need. To remove the software using the built-in Avira Uninstaller, you must first right-click the installed software and select the option "Remove this program" from the context menu. Remove Unused Backup Files If your company requires an automated backup schedule, every once in a while you may receive a file that has to be saved on your disk or network. These files include registration data, software updates, backup files of unknown programs and various settings and user data files. The built-in Avira Uninstaller allows you to quickly remove unwanted backup files. Let Avira Uninstaller scan your PC for all information that is not used by any of your applications. You can also remove all your old backups and restore them automatically at any time. Remove Unused Backup Files Avira Uninstaller is able to identify and remove all unwanted backup files, even those that haven't been used in quite a while. Additionally, you can set it up to automatically remove old backups. Remove Unused Services If your antivirus software is managed by a system service, you must be careful about what you install. That's why the inbuilt Avira Uninstaller scans and removes unused system services. It will identify all system services that are not in use by Avira. These services are located in the %systemroot%system32svc, %systemroot%system32svchk.d and %systemroot%system32svchk.exe folders. By removing them, Avira Uninstaller helps prevent conflicts between the installed antivirus software and existing, yet unused, components of Windows. Remove Un
