Introduction Autodesk AutoCAD was developed to automate the drafting and design process, giving architects, engineers, and drafters a common tool for design, visualization, and production. Once AutoCAD is installed on a computer, the user can easily create a drawing. There are dozens of tools to design, create, manipulate, and analyze the drawings. There are also over 60 different drawing types to choose from. Background AutoCAD was originally developed by the Autodesk Corporation, now owned by Autodesk. The company also creates other CAD applications and owns the Autodesk 3D Design, AutoCAD Map 3D, AutoCAD Architecture, AutoCAD Plant 3D, and AutoCAD LT brands.

AutoCAD is available as desktop, server, web, mobile, or cloud software. AutoCAD is available for many platforms including Windows, macOS, Linux, and mobile. The current version of AutoCAD is AutoCAD 2020, which was released in 2018. How to Use AutoCAD This article describes how to use AutoCAD's 3D modeling tools, which are contained in the Autodesk 3D Warehouse, and AutoCAD's 2D drafting tools. Use these steps to learn how to start a drawing in AutoCAD and add objects to it.

Step 1. Create a New Drawing The first step is to create a new drawing using the New command.

This step opens the Create Drawing dialog. In the dialog, you can enter the drawing name, a location, and a description. Select the New Drawing option on the menu bar. Step 2. Select a Drawing Type Select the drawing type, such as AutoCAD Drawing, Architecture, 2D Drawing, or 3D Drawing. You can open a drawing in a drawing type by choosing the application's option on the menu bar, as shown in the following figure. Select the drawing type from the menu bar. Step 3. Set the View Choose the view option to adjust the orientation of the drawing, and the toolbars to customize the workspace. Select the view. You can view a drawing in any of the following views: 3D Wireframe 3D Hidden 3D Shaded 3D Isometric 3D Hidden 3D Wireframe 3D Hidden 3D Sh

Raster graphics AutoCAD provides the ability to create raster graphics (bitmaps) for the screen

display, the vector graphics print output, and for use as the basis for static or animation-based animations and videos. The raster graphics are a two-dimensional array of pixels, where each pixel is the color (color pallet or color code) of each raster, drawn onto a raster canvas. For raster graphics, a raster canvas can be any 2-dimensional surface, where each pixel is a color. Raster graphics are a widely used format in the print industry. The drawing engine, or modeling engine, in AutoCAD supports a number of raster image files, including BMP, GIF, JPEG, PCX, PNG, TIFF, and JPEG 2000. There is also a native support for TIFF in AutoCAD LT. Other raster image formats are available in the application as user-specified import formats. AutoCAD supports a range of raster graphics color palettes, which are used to color the pixels in the raster image. These palettes allow the user to create custom raster images with custom color schemes. There are three types of raster color palettes available in AutoCAD: color schemes, image files and object palettes. Color schemes are named combinations of colors, and can be selected from color palettes. Color palettes contain a list of colors, and will produce images with colors selected from the palette. Object palettes contain object and object family objects and are similar to object libraries in other CAD products. These can be used to select colors from color palettes or objects, to specify the properties of an object. Image files allow the user to specify a set of image files and colors. For each image in the file, there is a color in the color palette. Many of the raster images files in AutoCAD are constructed from an image format, such as GIF, which is similar to a bitmap file. AutoCAD supports native support for the following raster image file formats: - AutoCAD RLE (AutoCAD Engineering) - AutoCAD PSD (AutoCAD PhotoStudio) - AutoCAD GIF (AutoCAD Graphics Exchange Format) - AutoCAD TIFF (Theoretically Independent Pixel) - AutoCAD JPEG (Joint Photographic Experts Group) - AutoCAD ca3bfb1094
