Is there any other way to get this software + the latest firmware version? ... Can there be more parameters in EPS Bike Interface" - Properties to unlock more ... or is it impossible. I tried to install the EPS Bike Interface on my computer and connect to the USB port to connect to my bike. I received the following response from the software: Connection failed. Error message: Failed to connect to computer via USB port. Reason: This device does not support a USB hub. I tried using a different USB cable (the same cable was used in my old computer), but the error message remains the same.

Bionx Bike Interface Software 11
