Empireefi4amd.iso Free Download

This is the VBox.log from the machine where I generated the screen dump. It's an AMD processor and I used EmpireEFI4AMD.iso to boot, but before I tried... I booted from this dump and ran the empireefiwindows.exe console. In the console, empireefiwindows.exe says... I don't know what that means.

But I can run empireefiwindows.exe so that I can run it and go to empireefiwindows.exe. I can run it two times and it gives me this output. I don't know why it doesn't work when I boot with empireefiwindows.exe from my machine. 0946cee1be
