I am new to working with RAW files and haven't found Photoshop very intuitive or easy to use. It was only after I discovered Canvas and the other utilities, such as the X-Rite ColorChecker Passport and prof that I realized RAW is an important tool. Since I am using the older version 5, the auto conversion from RAW varies. For some the best results, other get the worst. Almost all of the good conversions from RAW to PRO and photo. I don't know if this is an additional function in Lightroom or the quality has improved because I have just started. As I learn more about RAW, the quality will improve when I use it. Funny, two days ago my computer would not restart, or I would get a system lock-up from Photoshop. I wondered why, since I have no program running, RAM, hard drive, etc. I started thinking lightroom was in the way, causing the problem.

I shutdown and all is well. Now it's a problem again. I'll have to examine history and see if anything is using something. I have run out of time to investigate. I'm particularly pleased with Lightroom. I'm a videographer and it's been a joy to work with. Although I'd heard good things about the program from other video editors, I was surprised by the usability of Lightroom. Incredibly useful, but not intimidating to learn. I have been using Lightroom5beta for several months now and today I upgraded to the complete version 5. The upgrade was painless. and I have no complaint with the new version. Lightroom5 is the best beta version I have ever used so I don't think there will be a problem with the full version.

• Layer comp made easy: Photoshop now has a best of two worlds feature, which is a layer comp made easy! It's a direct drag and drop tool that lets you place and arrange. This is great for basic to intermediate level layers, but if you are a big graphic designer you may find it a little easier to use other tools that we're going to describe in the rest of the guide. Removing objects from layers, moving objects, and copying and pasting pretty much anything have never been made with a very simple approach. But now with the new comp tool you have Adobe Photoshop layer comping made easy, which in case you don't know, is a combination of Photoshop's new drag and drop placing feature, and even copying and pasting. **I am a designer with over 26 years of experience and have worked in a wide range of industries such as advertising, fashion, architecture, brand identity, and the arts. I have designed books, film, websites, films, and magazines that have won awards. My career path took a turn after having a child and having to work part time. A chance to drive around beautiful scenery and spend time with my son led me to finding Illustrator as a way of creating artwork at home. I began doing this and playing more and more at Adobe. This led to me designing a personal home website. The site was successful, so I moved to Adobe, and this is that point that I'm coming back to now. My passion is design and creative solutions. I love Adobe Photoshop and Illustrator, so working as a designer is what I love to do. It is my desire to produce innovations through design. I also want to be a good person and I want to have an impact on design.**
